

Sperm Cryopreservation and Strain Recovery from PolyGene AG.

Dear Researcher

Can you remember the last time you discussed with your team storing mouse strains?
Did you act?

And are you certain your precious mouse model is protected enough from **colony overaging**, **pathogen infection** or any other catastrophe that could handicap your research?

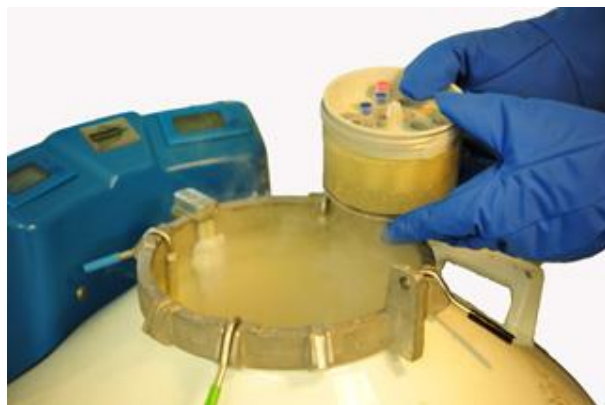

Well - we weren't, and therefore established a careful cryopreservation program for our internal strains. Offering this to you, we felt that we need to do more.

We introduce the World's First **Mouse Life Insurance** program:

» Save your mouse at PolyGene in a premium deal, and have it **revitalized for free** whenever you need it!

Why freeze?

- » For absolute safety
- » For saving maintenance costs
- » For focusing on mouse strains that matter
